

### Claims

1. An assembly comprising:  
a gas generator (12) with a flange (30) and  
a generator holder (14; 114), to which said flange (30) is fastened,  
5      said generator holder (14; 114) having a cylindrical peripheral wall (15), said  
peripheral wall (15) at least partially surrounding said gas generator (12)  
peripherally,  
at least one clamping extension (24) being provided in said peripheral wall  
(15) which is formed by partial lateral deformation of said peripheral wall (15),  
10      characterized in that said clamping extension (24) is delimited by at least one  
slit (22) in said peripheral wall (15),  
said slit (22) running substantially in peripheral direction (U) and defining a  
side of said clamping extension (24) ,  
said side of said clamping extension (24) constituting a stop for said flange  
15      (30).
2. The assembly according to Claim 1, wherein each clamping extension (24)  
is delimited by two slits (22) running substantially parallel to each other and  
extending in peripheral direction (U).
3. The assembly according to Claim 1, wherein said peripheral wall (15) is  
20      composed in peripheral direction (U) of alternating first wall sections (18) with  
clamping extensions (24) and second wall sections (20) without clamping  
extensions (24).
4. The assembly according to Claim 3, wherein said clamping extensions (24)  
are strip-shaped sections of said peripheral wall (15) having opposite narrow sides  
25      (32) which continue in one piece into second wall sections (20).

5. The assembly according to Claim 4, wherein said strip-shaped sections extend parallel to a central axis (A) of said generator holder (14; 114).

6. The assembly according to Claim 3, wherein said first wall sections (18) have bridges (26) which are separate from said clamping extensions (24), each  
5 bridge (26) connecting two adjacent second wall sections (20).

7. The assembly according to Claim 1, wherein said flange (30) completely surrounds said gas generator (12) peripherally.

8. The assembly according to Claim 1, wherein said generator holder (14) has a radial flange (28) on which said flange (30) of said gas generator (12) rests in an  
10 installed state of said assembly (10).

9. The assembly according to Claim 7, wherein on said generator holder (14) a flange (28) is provided, said flange (28) surrounding said generator holder (14) peripherally, said flange (30) of said gas generator (12) resting in peripheral direction continuously on said flange (28) of said generator holder (14).
